# Are photovoltaic panels directly fixed to the ground

## Overview

---

Ground-mounted solar panels are photovoltaic systems installed directly on the ground rather than on rooftops. These systems are supported by metal frames or pole structures anchored into the earth, allowing for customizable tilt and orientation. Even with a big yard. With ground-mounted installations, you have the flexibility to work with solar panels of any size, including large 'commercial' modules featuring 72 cells (or 144 half-cells) or more, whereas rooftop systems are typically restricted to 60-cell panels which are smaller and lighter.
