## Overview

---

With an average solar panel cost of \$31,558, solar panels are expensive. Solar system costs have significantly decreased in recent years, but the costly investment is primarily due to the materials, manufacturing, and installation costs. Solar panels can cut your electricity costs by 70% or more. Most systems cost at least \$10,000 to \$30,000. To find the most up-to-date solar panel costs in 2025, we compared research from. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. NLR's PV cost benchmarking work uses a bottom-up. According to the International Energy Agency, solar is the only renewable technology being deployed at a rate to meet net zero by 2050 targets. While this trend is good news for the climate, it is better news for China. Just a decade ago, China supplied 40% of the world's solar panels. Why trust EnergySage?

If you've been putting off solar because of sticker shock, this might change your mind: Most homeowners save \$37,000 to \$154,000 over 25. Average price of solar modules, expressed in US dollars per watt, adjusted for inflation. Data source: IRENA (2025); Nemet (2009); Farmer and Lafond (2016) - Learn more about this data Note: Costs are expressed in constant 2024 US\$ per watt. Global estimates are used before 2010; European market.
