# Basic classification diagram of photovoltaic panels

## Overview

---

The figures below show two possible configurations. Photovoltaic power systems are generally classified according to their functional and operational requirements, their component configurations, and how the equipment is connected to other power sources and electrical loads. The two principal classifications are grid-connected or utility-interactive. PV modules output is rated based on Peak Sun Hours (equivalent to 1000 W/m<sup>2</sup>). Find out everything you need to produce these important design elements without encountering any drawbacks. Creating the photovoltaic system diagram represents an important phase in. A photovoltaic (PV) system is an innovative solar energy technology that harnesses sunlight and converts it into electricity. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) to concentrate sunlight onto a small area, intensifying.
