Can broken photovoltaic panels be used again

Overview

A solar system with a broken glass panel often continues to work. However, even though broken solar panels may still generate electricity, their efficiency is significantly compromised. Damaged solar panel glass can lead to reduced sunlight absorption, causing a decrease in overall energy. The truth is, a broken solar panel can still function and produce power, but its performance and output will depend on the extent and nature of the damage. 1% of all usage cases — but they are still happening. During the production process, precautions are taken to minimize the risk of mishaps in shipping and storage. This current should still be usable, but your panel won't operate at maximum voltage.
