Can dual solar power generation be retrofitted

Overview

Modern hybrid retrofit kits now enable homeowners to upgrade their solar installations without replacing entire systems, delivering enhanced energy independence and significant cost savings. Whether you need more power to charge a new electric vehicle or because of increased home consumption (maybe you invested in a new heat pump), there are many reasons why people may want to retrofit an existing solar energy system. Retrofitting is the industry term for upgrading or expanding an. Solar retrofit is the process of upgrading existing solar energy systems to improve their efficiency, functionality, or capacity. Instead of replacing them, expansion is often the smarter option. While the most prominent dual-use application is building-integrated PV (BIPV), other dual-use PV technologies.
