Can solar panels with different power be connected together

Overview

The short answer is, yes, you can mix solar panels that have different wattages. Different wattage panels have different voltage and amps. Though mixing different solar panels is not recommended, it's not forbidden and things would be ok as long as each panel's electrical parameters (voltage, wattage, amps) are carefully considered. " Explore the electrical science behind mixing panels, learn which connection methods work best, and discover the technologies that can help your mixed-panel system perform at near-perfect efficiency. When panels with varying power ratings connect together, the system defaults to the lowest voltage or amperage. What are the rules for mixing panels of different wattage or even brand?
