Can the solar energy still generate electricity if it is broken

Support photovoltaic input and AC mains input
Suitable for home energy storage and emergency backup power supply

Overview

Yes, a broken solar panel can still produce power. The reduction amount depends on the crack severity. It's a common belief that a solar panel with any kind of damage is rendered completely useless and incapable of generating electricity. However, this is not entirely accurate. Damaged solar panel glass can lead to reduced sunlight absorption, causing a decrease in overall energy. Solar panels are crucial for generating renewable energy.
