Overview

China has set a new benchmark in its transition to renewable energy, with wind and solar power sources generating 26% of the nation's electricity in April 2025. The achievement marks the highest monthly share to date, as reported by global energy think tank Ember. Last year, a viral drone video from China's Guizhou province revealed an entire mountain range blanketed in solar panels stretching to the horizon. Guided by its goals of peaking carbon emissions before 2030 and achieving carbon neutrality by 2060, the country is rapidly reshaping its power. Solar energy share tripled from 4. China's new solar capacity increased from 103GW in 2022 to 333GW in 2024. Credit: Nordic Studio/Shutterstock.

Changing Solar Power Generation

How China adds more renewable energy than any other economy

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China Surpasses 1,000 GW of Solar Power: How the World's Energy ...

China surpassed 1,000 GW of solar capacity in 2025, nearly half of the global total. Industrial policy, state-owned firms, and private innovators together fuel its leadership.

Shaping the solar future: An analysis of policy evolution, prospects

Over recent decades, China has risen to a preeminent global position in both solar photovoltaic (PV) adoption and production, a feat underpinned by a suite of pivotal policy measures. ...

China achieves new milestone in energy transition

China has set a new benchmark in its transition to renewable energy, with wind and solar power sources generating 26% of the nation's electricity in April 2025. The achievement marks ...

ENERGY STORAGE SYSTEM

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW/115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

The Amount of New Solar Power Production Capacity China Is

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

Annual change in solar and wind energy generation

Change in solar and wind energy generation relative to the previous year, measured in terawatt-hours of primary energy using the substitution method.

Renewable energy jumps to new high, powered by China solar boom

China added almost 374 billion watts of renewable power -- three quarters of it

from solar panels -- in 2024. That's more than eight times as much as the United States did and five times what Europe ...

China is Set to Produce Half the World's Renewables by 2030

With steadfast investment, technological innovation and comprehensive governmental support, China continues to lead the global shift towards a more sustainable and resilient solar ...

solar revolution is shaking up the global energy game

Globally, China's clean energy boom is reshaping markets: the country makes 80% of the world's solar panels and 60% of its wind turbines, while leading exports of EVs, batteries, and heat ...

China's solar power capacity is on course to surpass coal this year

The increased power capacity would mark a major milestone in the country's long-standing effort to build a cleaner power system.
