# Clean electricity uganda

## Overview

---

Achieving net zero emissions by 2065 would require reaching USD 8 billion in annual clean energy investments in Uganda by the end of the decade, with almost 90% of this financing directed towards projects focused on improving energy access and expanding clean energy capacity. Achieving net zero emissions by 2065 would require reaching USD 8 billion in annual clean energy investments in Uganda by the end of the decade, with almost 90% of this financing directed towards projects focused on improving energy access and expanding clean energy capacity. Uganda's Ministry of Energy and Mineral Development has issued a new plan for the country's energy sector that sets out a robust pathway to meet economic growth and development objectives in a secure, affordable and sustainable way. The Energy Transition Plan, released today at the COP28 climate. The IEA examines the full spectrum of energy issues including oil, gas and coal supply and demand, renewable energy technologies, electricity markets, energy efficiency, access to energy, demand side management and much more. Through its work, the IEA advocates policies that will enhance the. Uganda has established the Energy Transition Plan (ETP), an ambitious document that aims to develop its abundant mineral and energy resources, foster economic growth, eradicate energy poverty, and guide it towards an equitable energy transition. With a population of approximately 45.9 million, the country faces significant challenges related to energy access, deforestation, and poverty.
