# Constant Temperature and Humidity Maintenance for Highway User Cabinets

**FLEXIBLE SETTING OF  
MULTIPLE WORKING MODES**

## Overview

---

In order to exert a stable function and performance of the test chamber, the selected place should maintain a perennial temperature of 15-35°C and a relative humidity greater than 85%. The ambient temperature at the installation site does not allow drastic changes. Keep insulated tools, PPE, and test instruments within a safe operating envelope. Our climate controlled storage cabinets deliver stable temperature and humidity, so rubber, polymer, and composite materials age slower, inspections pass more often, and field crews stay ready. The performance, reliability, and longevity of electronic components. Designed to meet the demanding requirements for precise humidity and stability, Advanced engineered design incorporates the latest in cabinet, refrigeration, temperature control and monitoring features.
