Difference between 12v and 48v inverters for RVs

Overview

At the core, the difference comes down to the voltage of the battery bank and the electrical system. Most traditional van builds run off 12V systems, while more advanced or power-hungry builds might use 48V systems—especially when large inverters or lithium battery banks are. In this guide, we'll break down the differences between 12V, 24V, and 48V systems, covering efficiency, cost, compatibility, and ideal use cases—so you can make an informed choice that fits your power goals. A 3,000-watt inverter at 12V will pull about 250 amps at full load. Wide. Both are portable, battery-stored electrical systems used to power lights, appliances and electronics when you are off-grid and unable to connect to mains (240V) power.
