Do you need to drill holes in the front and rear columns of the photovoltaic bracket

Overview

All holes should be drilled in the frame using appropriate drilling practice and safety precautions. When entering a new job site, you should verify with your supervisor what structural members can and cannot be drilled and if so, what methods can be used. This also includes steel framing. If you are alone, seek out the general contractor and ask them if they can perform a job walk to discuss your. Those pre-cut holes/tabs are about 21 mm (or about 8. A search of 'JDM to USMD license plate adapter' should reveal some options. Same with mine, seems like they forgot to give any forethought to mounting a rear plate other than 2 giant wood screws that. Is there a problem to drill a hole on what looks like an reinforced support column at the basement of a building, cutting through horizontal metal rods?

: r/AskEngineers Is there a problem to drill a hole on what looks like an reinforced support column at the basement of a building, cutting through. Preferably, in existing holes if possible. If new holes are required, they should meet the following guidelines: The edge of the hole should be no less than 40mm (1. Drilled a pilot hole first and finished up with a 64th oversize bit. Your everyday regular HSS. Position the splash board against the precast concrete column, predrill a 3/16-inch diameter hole through the splash board and 2 inches into the concrete, then drive a split-drive anchor to attach.
