# Does the battery cabinet have to be filled

## Overview

---

The battery is filled with electrolyte, which is a mixture of 35% sulfuric acid and 65% de-ionized water. Installing a battery energy storage system is a significant step toward energy independence. This involves more than just connecting wires; it requires careful attention to ventilation and clearance. Adhering. The system's output may be able to be placed into an electrically safe work condition (ESWC), however there is essentially no way to place an operating battery or cell into an ESWC. Someone must still work on or maintain the battery system. Working on a battery should always be considered energized. The battery rooms must be adequately ventilated to prohibit the build-up of hydrogen gas. In this blog you'll read what the difference is, and why that difference matters for the safety of your business, your employees and your insurance coverage.
