## Overview

---

These are known as Double-Glass designs (solar panels with double glass or glass solar panels). The double glass module, as the name implies, is a construction in which the typical aluminum frames and back sheet substrate are replaced by another glass panel. Compared with ordinary glass solar panels that only cover the front, double-glass solar panels are proven to be more reliable and durable, and weatherproof deployed in extreme environments under high temperature, high humidity, windy, salt-alkali, or drought conditions, such as Coastal frontiers, fishing. Glass-glass PV modules, also known as double glass solar panels, are photovoltaic modules encapsulated with tempered glass on both the front and back sides. The dual-glass structure provides. Bifacial solar panels take in sunlight from both sides. This helps them make 5% to 30% more energy than regular panels. From curved architectural glass to high-durability panels for extreme environments, we offer full customization, fast lead.
