

## PEES Power Systems

# Gambia power plant energy storage battery

## Overview

---

The project will consist of three components: (1) a grid-connected photovoltaic (PV) power plant with a total installed capacity of 10 MW including an associated battery energy storage station (BESS), (2) a number of off-grid PV and BESS units for rural health clinics, secondary schools and food. The GERMP comprises the erection of the 23 MW JSPS, the construction and connection of an 8MWh battery energy storage system (BESS), the improvement of transmission and distribution electricity network in the country and the improvement of electricity connections to schools and health. Energy demand in The Gambia has increased by 5.5% per year in recent years and today's connection of the new 23 MWp solar plant to the national energy grid will significantly increase Gambia's current generation capacity of 98 MW and enable electrification of rural areas. Why. This project isn't just about storing electrons; it's about safeguarding hospitals, schools, and businesses from blackouts that cost West African economies up to 2% of GDP annually [1]. Who's Reading This?

Let's Break It Down Forget those clunky lead-acid batteries your uncle uses for fishing. Energy demand in The Gambia has increased by 5.
