Growing wheat in photovoltaic panels

Overview

Wheat and grass-clover grown between the vertical panels produced nearly the same yield as crops in open fields. Because the panels only cover about 10% of the field, farming continues almost. Since 2022, the farm of Sylvain Raison, a farmer in Haute-Saône, has integrated an agrivoltaic canopy system. The team tested two systems: traditional south-facing tilted panels and vertical, east-west-facing bifacial panels. Agrivoltaic farming is the practice of using land for both agriculture and solar energy production.
