Heat storage solar vacuum tube

Overview

Solar vacuum tubes are a type of solar collector used for heating applications. That already gives us three solid reasons to take a very close look. However, the growing demand of solar energy and modern manufacturing techniques has. The need to establish sustainable energy sources has led to the increased interest on using vacuum tube solar collectors (VTSCs) for water and air heating. It provides 24/7 hot water, has 20+ year life, and zero emissions.
