## Overview

If your system pushes 5,000 watts, a 5,000-watt (or 5 kW) inverter is usually the move. But it's not always one-to-one. 6 kW for 5 kW of panels—to save cash without losing much power. Consequently, inverter sizes vary greatly. Additionally, you'll learn what appliances you can power and how you can select. An inverter needs to supply two needs: Peak or surge power, and the typical or usual power. Surge is the maximum power that the inverter can supply, usually for only a short time (usually no longer than a second unless specified in the inverter's specifications). You could. The solar inverter serves as the heart of any photovoltaic (PV) power system, performing the critical function of converting the direct current (DC) electricity generated by solar panels or stored in batteries into the alternating current (AC) required by standard appliances.
