## Overview

---

Adding solar panels is an obvious solution, but how many of these PV modules can your inverter handle?

A solar array can be up to 130% of the inverter capacity. So if you have a 4000 watt inverter you can install a 5200 watt solar power system. The central to these systems is the inverter, which converts the direct current (DC) produced by solar panels into usable alternating current (AC) for homes and businesses. To calculate the number of solar panels necessary, multiply the inverter's capacity by 130, which will result in the maximum number of solar panels.
