

## PEES Power Systems

**How many types of solar thermal power generation systems are there**

## Overview

---

According to the different ways of concentrating solar energy, solar thermal power generation systems can be divided into three types, namely trough solar thermal power generation systems, tower solar thermal power generation systems and dish solar thermal power generation systems. All solar thermal power systems have solar energy collectors with two main components: reflectors (mirrors) that capture and focus sunlight onto a receiver. From photovoltaic cells to solar thermal systems, these technologies vary in their working principles and uses.
