

## PEES Power Systems

# How many uninterruptible power supplies are there

## Overview

---

There are three major types of Uninterruptible Power Supply (UPS) system. Before you buy, compare the features of each and select the types best suited for your needs. An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide. UPS systems are divided into three types based on how power flows through the unit: standby, line-interactive and online double-conversion. Not all UPS systems are the same. They vary greatly in topology, size, capacity, form factor, etc. Each technology has its advantages and each may be necessary for configuring cost effective power protection, especially in complex.
