How to deal with the delamination of glass photovoltaic panels

Overview

The degradation process often begins in one corner and spreads across the module. If you notice any bubbles or creases on the backsheet, contact your installer immediately for a replacement. As glass accounts for 75% of the weight of a panel, its recovery is an important step in the recycling process. Current methods, such as mechanical. Delamination silently destroys solar panels from within, causing power losses and safety hazards. These layers are sealed tightly to prevent the internal corrosion.
