Release and remove all connected AC connectors from the inverter. Hook a flat-blade screwdriver (blade width: 4 mm) into the wide slot on the plug and lever it open. To remove the solar converter, one must first ensure that the system is powered down and disconnected from any electrical sources, 2. Unmount the converter from its installed position, observing safety protocols, 4. This will activate Rapid Shutdown. Never attempt to disconnect connectors while panels are producing power or in direct. As with any electrician's repair job, one of the first steps will be to shut off the power to prevent any harm to the person doing the work.
