# How to use 37 volt photovoltaic panels

## Overview

---

This guide aims to unravel the intricacies of PV systems by arming you with the required theoretical and practical know-how to wire solar panels with certainty. The panels will deliver 36v can I connect this system (12 v battery)?

. Add your inadequate solar charging to that and your batteries are already damaged. are you using 6 volt or 12 volt batteries?

what's with only having 500 watts to charger a 370 AH battery?

I hope you have fuses on this. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the wires). Example: A nominal 12V voltage solar panel has an. In solar photovoltaic (PV) systems, the voltage output of the PV panels typically falls in the range of 12 to 24 volts. Find the technical specifications label on the back of your solar panel. Note: If your panel doesn't have a label, you can usually find its.
