# Illustration of the first-tier photovoltaic panel size standards

## Overview

---

This complete guide outlines the standard solar panel size chart options available, and the optimal use for each. Getting these dimensions right is the difference between an optimized, high-output system and a frustrating, inefficient. Example: 5kW solar system is comprised of 50 100-watt solar panels. Alright, your roof square footage is 1000 sq ft. Can you put a 5kW solar system on your roof?

For that, you will need to know what size is a typical 100-watt solar panel, right?

To bridge that gap of very useful knowledge needed. Standard Residential Panels Optimize Space and Handling: The industry-standard 60-cell panel dimensions (65" × 39" × 1". Large commercial solar modules pack more cells, so they outrun smaller portable models on any solar panel size chart.
