# Installation of constant temperature box for inverter of solar telecom integrated cabinet

## Overview

---

As a reputable Solar Inverter Cabinet supplier, I've witnessed firsthand the impact of proper installation on system performance. A constant temperature is therefore the best prerequisite for a long service life and high reliability of all the electronic components. Particularly in the case of a completely populated enclosure, it is important that enough cool air flows past the components. There are several ways of achieving. The heat load of modern telecom cabinets is often high, and it's usually necessary to install enclosure cooling equipment to maintain the internal temperature below the higher limit specified by GR-3108-CORE. Enclosure heating may also be required in colder regions. In this blog, I'll guide you through the essential. Thermoelectric cooler assemblies offer a smaller, more efficient option to precisely cool or heat vital electronics in telecom enclosures, energy storage and battery backup cabinets.
