# Installation of explosion venting panels for energy storage cabinet

## Overview

---

. Last updated . All explosion vent installations should be located to allow full unrestricted discharge when system pressure exceeds the set pressure of the explosion vent. Provisions shall be made to prevent personnel from standing or walking on vents, as they risk falling in the event of an instantaneous opening at a predetermined pressure. Two people are recommended for handling Vents and Safety Frames for sizes 24" x 30" (rectangular) and it will be installed). Explosion vented equipment systems are. Scientists at the Pacific Northwest National Laboratory developed this patent-pending deflagration prevention system for cabinet-style battery enclosures. Intellivent is designed to intelligently open cabinet doors to vent the cabinet interior at the first sign of explosion risk. This functionality.
