# Is it good to install photovoltaic panels on water

## Overview

---

Studies show that bifacial solar modules installed over water can achieve an extra 2–4% energy yield. AccuSolar's floating systems are engineered to capitalize on this effect. While these photovoltaic systems need occasional cleaning, their operation demonstrates remarkable water conservation benefits. To begin at the beginning, the production of solar panels is no different to any other production processes: water plays a role in producing certain components such as the production of photovoltaic units. This innovative approach offers numerous advantages, such as maximizing land use, reducing water evaporation. Pairing PV with water infrastructure has centered around two techniques: floating PV and PV-covered irrigation canals.
