## Overview

However, advancements in technology have made solar power a more viable option for use in the Arctic and Antarctic regions. Much of the North American Arctic remains dependent on fossil fuels, both for heating and electricity generation. Such dependence creates greater economic and energy insecurity, and increased health impacts for those relying. This apparent paradox has led many to dismiss the potential of solar power in extreme northern latitudes – but the reality might surprise you. The researchers have explored whether solar. The project manager for Svalbard Energi, Torbjørn Grøtte, explained why Arctic towns are still using dirty energy to keep their grid up and running. "The wind doesn't blow all the time," said Grøtte. Solar power has also been proven to be cost-effective in.
