**Is there any difference between
a distribution cabinet and a
battery cabinet**

Overview

Low-level distribution cabinets and Power distribution boxes are used for less critical circuits, ensuring that power is distributed efficiently across various applications. Its main job is to distribute electrical power from a main source to multiple smaller circuits. It takes the power that comes in from a power cabinet or a main electrical supply and splits it up to different areas. A BESS cabinet (Battery Energy Storage System cabinet) is no longer just a “battery box. It has a relatively simple structure and is mostly used for terminal power distribution.
