

PEES Power Systems

Italian energy storage battery prices

Overview

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. The result of the auction are tariffs that came dramatically below the reserve premium which was set at €37,000 per MWh per year. From ESS News Italy has completed its first auction for grid-scale battery storage capacity, awarding all 10 GWh on offer under the new MACSE scheme (Meccanismo di. The €5,000 boost from the Italian energy regulator has come via changes to three key parameters: the investment cost (INV), the rate of return on invested capital, and the operational cost factor (CFO), leading to a higher price cap in the upcoming capacity market auction for energy storage. Just under 4GWh is completed and/or operational, with a further 2GWh+ under construction. The demand for energy storage in Italy has been clear over the last half a decade, with solar and wind generation. Clean Horizon has released its latest Energy Storage Price Forecast for Italy, providing valuable insights into one of Europe's most dynamic emerging markets for battery storage. Italy is accelerating its energy transition with ambitious targets and a robust policy framework, aiming to deploy 71. While utility-scale projects now average €280/kWh – down 18% from 2023 – residential systems still hover around €980/kWh. How did a country with 25% solar penetration end up with such wild price variations?

The answer. Italy is forecast to deploy more storage capacity than any other European nation in 2024 – the European Commission has approved €17.7bn of storage funding under 'state aid' rules, while the MACSE storage procurement mechanism is expected to be the catalyst for a storage surge in 2025 Italy is.
