# Negative pressure hybrid energy storage system

## Overview

---

CAVs proved modular, scalable, and environmentally robust, suitable for both energy and water management. Hybrid systems combining BESS and CAVs offer strategic advantages in balancing renewable intermittency. Machine learning and hydraulic modeling support intelligent control and. BESS units ranging from 5 to 400 kWh were modeled using a Nonlinear Autoregressive Neural Network with Exogenous Inputs (NARX) neural network, achieving high SOC prediction accuracy with  $R^2 > 0$ . Larger batteries (400-800 kWh) effectively reduced grid purchases and. Hybrid energy storage systems (HESS), which combine multiple energy storage devices (ESDs), present a promising solution by leveraging the complementary strengths of each technology involved. With sustained growth in the global demand for. llenge to conventional power systems. Energy storage affects every aspect of power systems from generation to consumption and bring great benefits to renewable energy resources and power grids.
