# New energy site operation and maintenance plan planning

## Overview

---

In this detailed guide, we explore how renewable energy project managers can implement effective operations and maintenance planning strategies using robust business intelligence and data analytics techniques. The mission of FEMP is to reduce the cost and environmental impact of the Federal government by advancing energy efficiency and water conservation, promoting the use of distributed and renewable energy, and improving utility management decisions at Federal sites. Each of these activities is. From our experience, the overall program should contain five very distinct functions making up the organization: Operations, Maintenance, Engineering, Training, and Administration—OMETA. Beyond establishing and facilitating the OMETAs links, O&M managers have the responsibility of interfacing with. As utility-scale solar and battery energy storage systems (BESS) continue to proliferate across the energy landscape, establishing a robust, standardized O&M program has become essential. The progression of offshore wind development in the United States is an exciting story: new wind energy areas (WEAs) are being determined, auctions are being held, and the first commercial projects are under construction or even delivering energy. However, the story does not end once the wind farm.
