

PEES Power Systems

**Outdoor power supply
automatically cuts off when
power is on**

Overview

The typical reasons your power keeps going on and off are overloaded circuits and weather-related issues. Many modern power strips come with built-in surge protection. You might start to worry about extension cords trailing through your home or the cost of repairs. But before you panic, know that.

Ground Fault Circuit Interrupter (GFCI) protection: Required by code for safety, GFCI outlets shut off power quickly if an electrical fault is detected.

Weatherproof covers: These protect the outlet when not in use from moisture, dust, and debris.

Outdoor power supply automatically cuts off when power is on

BMS shutting off system power when over voltage?

We've taken to either shutting the system down in full sun and using no electricity, thus allowing the BMS to just shut off and stay off, OR splurging as much power as we can and creating a ...
