# Photovoltaic energy storage grid connection point selection

## Overview

---

NEC provides two main options for a PV system point of connection: supply-side (705). Load-side connections are limited by the 120% rule, which protects the panel's busbar rating. 11 supply-side connection, made between the meter. Interconnection standards define how a distributed generation system, such as solar photovoltaics (PVs), can connect to the grid. This. Energy storage is expected to play an increasingly important role in the evolution of the power grid particularly to accommodate increasing penetration of intermittent renewable energy resources and to improve electrical power system (EPS) performance. Energy Management System or EMS is responsible to provide seamless integration of DC coupled energy storage and solar. Typical DC-DC converter sizes range from 250kW to 525kW. The development of this guideline was funded through the Sustainable Energy Industry Development Project (SEIDP). With many years of experience and practical, technical expertise, we select the correct grid connection components based on your designed photovoltaic system and the grid operator's specifications, including route cables.
