Photovoltaic panel pile erection method

Overview

Hydraulic pile drivers are the most common in solar construction, but vibratory hammers and impact drivers may also be used depending on soil density and pile type. Equipment must be calibrated to ensure piles are driven to the correct depth without damaging the steel. Impact driving is a traditional and widely used method in pile installation—where a heavy weight, or hammer, repeatedly strikes the top of the pile—driving it into the ground. Preparation includes thorough site assessment, soil testing, and planning. Soil conditions can vary widely across large utility-scale sites. What is Piling?

Piling involves driving or drilling piles—long. At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond.
