Photovoltaic panel series connection process

Overview

In a series wiring setup, the solar panels are connected end-to-end. When panels are wired in series, their voltages add up, while the current remains the same as that of a single. Wiring solar panels in series means connecting the positive terminal of one panel to the negative terminal of the next panel, creating a chain that increases total voltage while maintaining the same current. This connection creates a daisy chain effect. In this article, we'll take a close look at a latter type: here is a short step-by-step guide on how to connect solar panels in series.
