# Photovoltaic support purlin layout

## Overview

---

A purlin in photovoltaic mounting systems is a horizontal beam or bar that serves as the primary support structure for the solar panels. It is mounted perpendicular to the main rafters or trusses of a structure (in rooftop installations) or onto the main posts and beams (in. In the intelligent photovoltaic tracker brackets, cold-formed purlins were used to support the photovoltaic panels, and located spanning the horizontal single-axis and the module frame. We will focus on the rafters and its static system in this article. For each row, discrete a/c. This in-depth guide will explore everything you need to know about PV purlins, from their material composition to their decisive role in the success of your solar project. Yet here's the kicker: 85% of solar array failures traced back to improper structural support according to NREL data. a purlin structure for a photovoltaic.
