

PEES Power Systems

Poland electricity distribution

Overview

The distribution subsector consists of 33 distribution companies, all of which are joint-stock companies, and utilizes 110 kV, 15 kV, and 0.4 kV lines to supply electricity to customers. [1] In recent years, Poland has been reducing its reliance on coal, increasing its wind and solar power capacity, and introducing nuclear power to diversify its energy mix and reduce carbon emissions. In 2023, solar energy expanded by. Poland is undergoing an ambitious energy transition, aligning with broader European goals to reduce greenhouse gas emissions and substantially increase the share of renewable energy sources (RES) in its national energy mix. On the basis of the available published toll rates and operators' tariffs, a clear upward trend can be observed, which will affect both small and medium-sized. The volume of gross domestic electricity production in 2024 was at a higher level compared to the previous year, and amounted to 166,990 GWh (an increase of 2. In Poland, they are chiefly coal- and.
