# Power failure automatic conversion 12v inverter external

## Overview

---

This is caused by low intermediate circuit DC voltage. This can be caused by a missing supply voltage phase from a blown fuse or faulty isolator or contactor or internal rectifier bridge fault or simply low mains voltage. POSSIBLE FIXES: Check mains supply and fuses. Inverters, which convert direct current (DC) to alternating current (AC), are critical components in various applications, including renewable energy systems, uninterruptible power supplies (UPS), and industrial motor drives. However, like any electronic device, inverters can experience faults. Summary: Need to adapt your inverter for 12V battery systems?
