Price deviation of solar modules

Overview

Solar module prices in 2025 have stabilized after years of dramatic fluctuations, with global wholesale prices ranging from \$0.28 per watt depending on technology, origin, and regional market conditions. Data source: IRENA (2025); Nemet (2009); Farmer and Lafond (2016) – Learn more about this data Note: Costs are expressed in constant 2024 US\$ per watt. Global estimates are used before 2010; European market. The analysis and cost model results in this presentation (“Data”) are provided by the National Renewable Energy Laboratory (“NREL”), which is operated by the Alliance for Sustainable Energy LLC (“Alliance”) for the U. Department of Energy (the “DOE”). TOPCon Technology Dominance: TOPCon modules have. PV module prices have fallen by around 5% to 8% across all technology classes in recent weeks. This means that prices are moving strongly back toward the level we saw at the beginning of the year, which can only be described as unhealthy for. Each year, the U. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems.
