# Prices of components in solar power stations

## Overview

---

Utility-scale PV investment cost structure by component and by commodity breakdown - Chart and data by the International Energy Agency. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. This article examines price lists of photovoltaic power generation components across different eras, revealing how technological breakthroughs and market forces reshaped solar. Historic Low Pricing: Solar costs have reached unprecedented lows in 2025, with systems ranging from \$2.50 per watt installed, making the technology more accessible than ever before. Federal Tax Credit Urgency: With Congress proposing to end the 30% federal tax credit after 2025, homeowners.
