Rooftop distributed solar installation energy storage

Overview

Imagine your house secretly moonlighting as a mini power station – that's essentially what distributed solar energy storage systems do. These setups combine solar panels with battery storage, allowing homes and businesses to generate, store, and manage their own clean. The solar array on your home is just one system. Your solar array can do so much more. It can sync with other systems to provide a meaningful amount of electricity. A DPP is a network of solar and battery systems that are responsive to the energy grid. DPPs are made up of Distributed Energy Resources (DERs). This article will guide you through the basics of.

Additional Information
Solar DER can be built at different scales--even one small solar panel can provide energy. In fact, about one-third (link is external) of solar energy in the United States is produced by small-scale solar, such as rooftop installations. Household solar installations are called behind-the-meter solar; the meter measures how much electricity a consumer See more on energy.gov/SEIA
