# Rural hydroelectric energy storage system

## Overview

---

Tens of thousands of small-scale hydro energy storage sites could be built from Australia's farm dams, supporting the uptake of reliable, low-carbon power systems in rural communities, new UNSW-Sydney-led research suggests. Support CleanTechnica's work through a Substack subscription or on Stripe. A PSH system stores energy in the form of gravitational potential energy of water, pumped from a lower elevation. This work proposes the design of an integrated system combining solar and hydropower to effectively meet the energy and water needs of a typical community of 10,000 inhabitants. The methodology adopted is based on needs assessment, equipment sizing (solar panels, pump, tank, turbine, and. However, hydro electric storage is growing as a fertile ground for innovation and advanced technology in a world yearning for sustainable and economical solutions. Emerging hydropower technologies are ushering in a new era of renewable energy generation.

History

Pumped storage plants can operate with seawater, although there are additional challenges compared to using fresh water, such as saltwater corrosion and barnacle growth. Inaugurated in 1966, the 240 MW Rance tidal power station in France can partially work as a pumped-storage station. When high tides occur at off-peak hours, the turbines can be used to pump more seawater into the reservoir than the high tide would have naturally brought in. It is the only large-scale power plant of its kind.
