# Senegal electric grid

## Overview

---

Energy is produced by private operators and sold to the Senelec energy corporation. According to a 2020 report by the International Energy Agency, Senegal had nearly 70% of the country connected to the national grid. The infrastructure forms part of the Senegal Power Compact, a program financed by the Millennium Challenge Corporation, with total. As of April 2020, the energy sector in Senegal has an installed capacity of 1431 megawatts (MW). Due to dependence on expensive. With a national electricity access rate of 84%, Senegal is making progress towards universal energy access, yet more than 30 % of rural communities remain disconnected from the grid. As part of the Just Energy Transition Partnership, Senegal has committed to bold reforms to increase renewable. Senegal is one of Africa's fastest growing economies, attracting global investment, yet economic growth and progress are constrained by the high cost of electricity to grid-connected firms and low access to electricity in the peri-urban and rural areas.

### 5 Projects Powering Senegal's Energy Transition

Major energy projects in Senegal are pushing the country toward clean power and nationwide electrification.

### Energy in Senegal

Overview Electricity production Electricity sector Electricity demand and supply gaps

Senegal's major source of electricity is diesel. The rest is mostly coal and hydroelectricity. Renewables should make up 30% of the country's energy mix and the wind farm in Taïba Ndiaye will supply half. The planned energy mix aims to help Senegal move away from oil dependence, although newly discovered gas reserves offshore are expected to be used domestically to repl...

## Senegal Power Compact

The Access Project aims to extend the electrical grid in selected areas in Senegal's south and center regions that have high economic potential but low connection rates.
