For high-density cabinets (>500kWh), the 2023 Gartner Emerging Tech Report recommends sub-5-ohm grounding. "Grounding isn't a set-and-forget solution. Each battery is bonded to the rack through the mounting screws. Ground metal enclosures, junction boxes, and inverter cabinets to avoid electrical risks. In most stationary systems, the negative side of the battery stays ungrounded. Proper grounding helps meet electrical safety standards and protects. Grounding - Ensure that all batteries are installed in the EG4 battery rack using the mounting hardware provided. A ground mount array needs its own ground rod and the ground mount rack itself, and any metal boxes, etc.
