# Solar container battery high voltage or low voltage

## Overview

---

HV batteries—short for high voltage batteries—typically operate at voltages above 60V, with many residential systems running between 100V and 600V. But this isn't just a numbers game. These systems are designed to provide higher power output and are often favored in large-scale residential solar systems, electric vehicles, and commercial applications. High voltage (HV) and low voltage (LV) solar batteries are both designed for energy storage, but they cater to different needs.
