Solar power station is to

Overview

Solar power stations offer a scalable solution to meet energy needs while significantly reducing carbon emissions and dependence on finite fossil fuel reserves. They are different from most building-mounted and other decentralized solar power because they. Solar radiation may be converted directly into electricity by solar cells (photovoltaic cells). In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.
