Solar water pump motor forward and reverse

Overview

In this tutorial, JNTech engineers demonstrate how to set forward and reverse rotation on a solar pump inverter, helping you quickly correct pump direction during installation or commissioning. GK330 special inverters are developed for the power supply of water pumps based on the core control algorithm of GK3000 high performance inverters and the control requirements of PV water pumps. All series products apply Infineon power modules. The function of Maximum power tracking, dormant at. Within the sphere of agricultural engineering, the integration of inverter technology into solar-powered water pump systems marks a pivotal innovation enhancing sustainable irrigation practices. Support driving single-phase motor and three phase 220V motor. However, water conservation and efficiency techniques such as using low-pressure sprinklers or drip irrigation can reduce the amount of water you need to deliver to your plants and the cost of fuel because solar energy is free.
