The roof can generate solar power

Overview

According to our calculations, the average-sized roof can produce about 21,840 kilowatt-hours (kWh) of solar electricity annually—about double the average U. In a perfect world, the average roof in the U. But also, the world isn't perfect. Realistically, your roof's solar generation potential will be less than that. 4 million American homes now powered by solar panels. As we enter 2025, technological advances, improved financing options, and strong federal incentives have made rooftop solar more. Solar power is a clean, renewable source of energy that can help you save money on electricity bills while reducing your carbon footprint.
